Provides current knowledge about separation and interactions of asymmetric molecules, as well as experimental and commercial materials such as columns, instruments, and derivatization reagents. Extensive applications are tabulated by both chromatographic technique and compound class, and discussions of recent special topics are useful in planning new work. This unique volume organizes most of the significant, currently available knowledge regarding the chromatographic separations of stereoisomers. Both diastereomers and the more difficult, controversial area of enantiomers are covered in depth with respect to GC, HPLC, and classical chromatographic techniques. Analytical, organic, pharmaceutical, and other chemists as well as pharmacologists and biochemists are among those whose work appears in the more than 800 references cited.
