Combustion Thermodynamics and Dynamics

Joseph M. Powers

Combustion Thermodynamics and Dynamics Joseph M. Powers

Combustion Thermodynamics and Dynamics builds on a foundation of thermal science, chemistry, and applied mathematics that will be familiar to most undergraduate aerospace, mechanical, and chemical engineers to give a first-year graduate-level exposition of the thermodynamics, physical chemistry, and dynamics of advection-reaction-diffusion. Special effort is made to link notions of time-independent classical thermodynamics with time-dependent reactive fluid dynamics. In particular, concepts of classical thermochemical equilibrium and stability are discussed in the context of modern nonlinear dynamical systems theory. The first half focuses on time-dependent spatially homogeneous reaction, while the second half considers effects of spatially inhomogeneous advection and diffusion on the reaction dynamics. Attention is focused on systems with realistic detailed chemical kinetics as well as simplified kinetics. Many mathematical details are presented, and several quantitative examples given. Topics include foundations of thermochemistry, reduced kinetics, reactive Navier-Stokes equations, reaction-diffusion systems, laminar flame, oscillatory combustion, and detonation.

From reader reviews:

Kristin Todd:

Book is to be different for each grade. Book for children until finally adult are different content. As you may know that book is very important for us. The book Combustion Thermodynamics and Dynamics had been making you to know about other expertise and of course you can take more information. It doesn't matter what advantages for you. The reserve Combustion Thermodynamics and Dynamics is not only giving you much more new information but also for being your friend when you sense bored. You can spend your current spend time to read your guide. Try to make relationship with the book Combustion Thermodynamics and Dynamics. You never feel lose out for everything if you read some books.

Brad Hawkes:

The book Combustion Thermodynamics and Dynamics will bring someone to the new experience of reading the book. The author style to spell out the idea is very unique. In the event you try to find new book to learn, this book very ideal to you. The book Combustion Thermodynamics and Dynamics is much recommended to you to read. You can also get the e-book through the official web site, so you can easier to read the book.

Charles Smith:

Don't be worry should you be afraid that this book will certainly filled the space in your house, you could have it in e-book means, more simple and reachable. That Combustion Thermodynamics and Dynamics can give you a lot of good friends because by you checking out this one book you have factor that they don't and make a person more like an interesting person. That book can be one of one step for you to get success. This guide offer you information that probably your friend doesn't understand, by knowing more than various other make you to be great men and women. So , why hesitate? Let me have Combustion Thermodynamics and Dynamics.

Kerry Giles:

As we know that book is essential thing to add our expertise for everything. By a guide we can know everything we wish. A book is a range of written, printed, illustrated or perhaps blank sheet. Every year has been exactly added. This reserve Combustion Thermodynamics and Dynamics was filled concerning science. Spend your spare time to add your knowledge about your technology competence. Some people has various feel when they reading any book. If you know how big benefit from a book, you can feel enjoy to read a guide. In the modern era like at this point, many ways to get book that you wanted.
